Inter-Node Interaction (glossary)

From SEBoK
inter-node interaction

The combination of communications, cooperation, and collaboration among the different nodes or elements of a system to act together to solve both local and strategic problems. Adapted from (Woods 2006)

According to Jackson and Ferris (2013) internode interaction is the primary principle of the integrity characteristic.

Sources

Discussion

This is essentially the same concept discussed by Woods (2006) in a resilience context except that the term used by Woods is "cross-scale interaction."

SEBoK v. 2.2, released 15 May 2020
