System Deployment and Use (glossary)

From SEBoK
system deployment and use

A set of core technical activities of systems engineering in ensure that the developed system is operationally acceptable and that the responsibility for the effective, efficient, and safe operations of the system is transferred to the owner. Considerations for deployment and use must be included throughout the system life cycle. (Created for SEBoK)

Source
This definition was developed for the SEBoK.

Discussion
System Deployment and Use is a SEBoK knowledge area; it includes systems engineering activities for system deployment and operation in its operational environment; and for the maintenance and logistics support of the system through life.
